

Investment in Solar Energy: Good for Texas

Texas has abundant resources to generate solar energy, which:

- *relieves distribution congestion in load centers/reduces demand on the utility grid.*
- *is a natural peaking unit, providing power during hottest time of day.*
- *helps offset high fuel costs with local, clean resources.*
- *helps Texas meet emission reduction goals.*
- *stimulates creation of quality local jobs in a high growth industry (about 25% per year).*
