

FIVE WAYS VERA EXTENDS SECURITY BEYOND DROPBOX

Vera is a data security platform that secures any type of data - Office files, PDFs, videos, and more - everywhere it travels, and anywhere it's stored. Vera ensures only approved users can access your critical business information, and gives IT teams the tools to track, audit, and update access to sensitive information, even after it's moved out of Dropbox.

1

Protect confidential and classified content anywhere

By protecting files with Vera, you can secure your Dropbox files “through the last mile,” once they’re removed, emailed, or downloaded from a shared folder. Vera encrypts any file type, assigns permissions, and ensures only authorized users can access your most confidential information.

2

Automatically secure confidential files

Automatically secure files uploaded into specific Dropbox folders, or protect your entire Dropbox account. Set access controls and policy permissions based on existing folder access rights.

3 Track content through the last mile

Never lose control of your content, even if it's downloaded, copied, or moved into an untrusted sharing service. See where files are opened, anywhere in the world, in real-time, and report on the full history of each file.

4 Get a global recall button that actually works

We've all done it: clicked share a moment too fast, and accidentally sent a private document to a distribution list, a personal email, or just the wrong person. Vera gives you a recall button that actually works, on any file, from any device, anywhere in the world. Even if your email is forwarded to a competitor, you can revoke access from anyone, instantly.

5 Increase security without changing the way you work

Vera protects any file type on any device, in Dropbox and beyond, which is critical for businesses in highly regulated industries. Whether your employees email sensitive attachments, pass around USB drives, or move content to unsanctioned public cloud services, Vera ensures only people with the right credentials can access your critical business information.
